Information about Water Conservation

Include information about what you learned in class.

Why is it important to conserve water?

How much water is available for human use?

Caption describing picture or graphic.

What might happen if too much water is polluted?

Who is in charge of managing water in your community?

CONSERVING WATER AT HOME

List some ways here that water can be conserved in people's houses.

Also include what NOT to put into water: paint, toxic chemicals, and chemicals that are difficult to remove from the water.

List suggestions of places where people in your community can dispose of chemicals properly rather than dumping them into storm drains or down the kitchen drain.

Also include clip art of pictures of objects that clarify your message to the

Conserving Water at Work and School

Include some information on how people can make changes to conserve water at work and school. Water conservation doesn't stop once a person leaves the house.

Caption describing picture or graphic.

If every home, business, and school relied on practices that preserved water and encouraged people to make ethical choices with water, our pollution problems would be a lot smaller.
